

Formal Accreditation of Training Provided by DigiLog UK Ltd.

DigiLog UK Ltd is a company that has been instrumental in introducing cutting edge Voice Risk Analysis (VRA) tools and solutions into the Financial Services and other Commercial arenas, in addition to its work in Security, Loss Prevention and Law Enforcement.

DigiLog's Advanced Validation Solutions (AVS) combine powerful Behavioural Analysis Techniques, known as Narrative Integrity Analysis, with the most sophisticated Voice Risk Analyser Technology on the market, enabling the fast and accurate validation of genuine customers and highly focused identification of key integrity risk issues.

Inherent to the success of DigiLog's AVS is the comprehensive training and support provided to all of its clients' staff engaged in the delivery of the Solution. In recognition of this, DigiLog, working in conjunction with the National Open College Network, is proud to have succeeded in developing an accredited programme of training as governed by the National Qualifications Framework and regulated by Qualifications and Curriculum Authority (QCA), in England.

The National Open College Network (NOCN) is one of the largest recognised qualifications awarding bodies in the United Kingdom and is subject to regulation by QCA (in England), ACCAC (in Wales) and CCEA (in Northern Ireland). Representing and quality-assuring the work of its licensed Open College Networks (OCN's), the network offers national qualifications and a local, flexible and responsive accreditation service that has national strength and nationally recognised value and quality.

NOCN provides national qualifications and programmes in a wide range of subject areas and provides recognition of achievement through the award of credit.

NOCN works in partnership with organisations to develop learning strategies that enable people to participate and succeed. The fully integrated service of accreditation and qualifications helps to secure deliverables relevant to learners and employers, with robust standards, achievable goals and progression opportunities for all.

Learners get the recognition their learning deserves by a system of credits and levels.

NOCN credits are accepted as a means of entry to further and higher education and are recognised by employers and trainers as proof of skills and achievements.

A Credit is awarded for learning outcomes that are achieved by a learner for every 10 hours of learning. Credits quantify the achievement of the learner and are awarded at one or more levels. DigiLog's training is recognised at level 2 and 3

- Level Two is comparable to NVQ2, Intermediate GNVQ and GCSE grades A*-C.
- Level Three is comparable to NVQ3, A Level, AS Level and AVCE.

These qualifications are accredited by the Regulatory Authorities (RAs) such as the Qualifications and Curriculum Authority (QCA) and the Quality Assurance Agency (QAA) in England.
